

Brainstorming

The initial ideas I considered resulted in four possible outcomes:

- Steam redesign
- E-commerce figurine website
- Anime recommendation website
- Gaming community website

After evaluating these options, I decided to develop an anime recommendation website, as it allows me to focus primarily on design rather than complex functionality. Platforms such as e-commerce websites require multiple features and sub-pages, which would shift the focus away from the visual and user experience aspects of the project.

Why I Chose an Anime Recommendation Platform

I chose an anime-based recommendation platform because the other ideas would have required building large-scale systems with extensive functionality. By selecting this concept, I can concentrate more on layout, typography, and overall user interface design while still creating a meaningful and engaging platform.

Project Idea

This service helps users discover new anime based on the ones they've enjoyed, offering suggestions for similar shows (for example: "If you liked this, you might also enjoy that"). It also provides time-based recommendations, allowing users to choose anime that fit the amount of time they have available. Users can track their watchlist and stay updated with the latest episodes, making it easier to manage their anime viewing experience.

Pages

1. Sign-in Page
Let's users create or log-in an account.
2. Homepage
Overview of the platform and featured anime
3. Time-Based Recommendations

Suggests anime based on the user's available time.

4. Personalized Recommendations

Curated anime suggestions based on the user's preferences.

5. Anime Showcase

Detailed pages for individual anime, including descriptions.

6. Watchlist

Allows users to track anime they plan to watch or are currently watching.

7. User Account

Profile page with user details.

8. Contact Page

Let's users send feedback, inquiries, or suggestions.

Functionalities

1. Homepage

- Includes a filter system, a dropdown, access for the time-based and personalized recommendation pages.

2. Time-Based Recommendations

- Includes a slider where users choose their available viewing time.

3. Sign-in Page

- Includes a simple Sign-in / register form.

4. Watchlist

- Includes a dropdown for each anime listed where users can choose a viewing status and update the status anytime.

(Tracking system)

- Users can favourite anime using a star button to save series they like.

5. Contact Page

- Which launches an email software with a prefilled message based on the submitted form.
